Second wave approaching: Not enough awareness

Vaccination ongoing but level of coordination is not that strong.

Needs of community has not been understood and better coordination required

**4**  
Are we on track to respond to people's WASH needs during COVID-19?  
What do we need to do more of or do differently to ensure that everyone has the WASH services that need at this time?

How to influence the discussion on social protection response?

Increasing child poverty

changing face of the poor - need for analysis

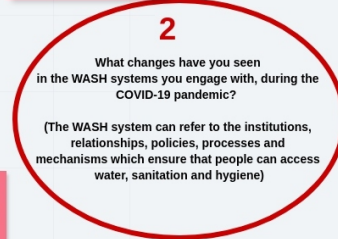

Triple-click to share your reflections on the case study

Triple-click to share your reflections on the case study

Triple-click to share your reflections on the case study

reduced ability for people to pay for services

Some of the priorities that Gerard mentioned for DFAT such as health security and economic recovery seem to be common for govts and ODA. how to best position/advocate for WASH as essential for these?

More attention on WASH in other public places - transit centres, public buildings and spaces, markets, other businesses. WE are looking more at work places

Vulnerable categories - complex - how to identify multiple categories and be more nuanced in our analysis?

There is pressure on WASH in schools, health centres and workplaces but these services are essential for recovery of communities post covid

Water systems in the Pacific region have been under stress for some time and covid will reduce system reliability and coverage as well as water quality.

Much more focus on hygiene in a systematic way - putting the H back in WASH in our systems strengthening work

In our region, some utilities are in a good financial position due to cash reserves but others may be in distress - also puts the need to increase efficiencies even more at the forefront

WASH
